                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
a haploid genome (n=7) of approximately 40 Mpp. Rice blast is an important model fungal pathogen for studying numerous aspects of the fungal-host interaction. In order to facilitate genome wide analysis, a BAC library containing 9216 clones with an average insert size of 130 kbp was constructed. This library represents greater than 25% genome coverage. High density colony filters are available upon request."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AQ447125 670 bp DNA linear GSS 08-APR-1999 mgxb0005C20f CUGI Rice Blast BAC Library Magnaporthe grisea genomic

```
numerous aspects of the fungal pathogen for studying numerous aspects of the fungal-host interaction. In corder to facilitate genome wide analysis, a BAC library containing 9216 clones with an average insert size of 130 kbp was constructed. This library represents greater than 25% genome coverage. High density colony filters are available upon request."

//note="Vector: pBACWICH; Site_1: HindIII; Site_blast is one of the most devestating fungal diseases
of rice world wide. It is a filamentous ascomycete with
a haploid genome (wide ingal pathogen for studying
numerous aspects of the fungal pathogen for studying
numerous aspects of the fungal-host interaction. In
order to facilitate genome wide analysis, a BAC library
containing 9216 clones with an average insert size of 130
kbp was constructed. This library represents greater
than 25x genome coverage. High density colony filters
are available upon request."

A DNA sequence (AAT16102) coding for a xylanase precursor (AAR92054) was isolated from a gene library of Bacillus sp. 720/1 (LMG P-14798). The sequence (AAT16103) for the complete gene including 5' and 3' untranslated sequences was also obtd. The gene may be incorporated into a vector and expressed from either its own promoter or from the Bacillus pumilus PRL B12 promoter (see AA073996), and used for profd. of recombinant thermostable xylanase in transformed hosts, pref. Bacillus licheniformis or B. pumilus. The enzyme is useful in the paper-pulp, animal feed and baking industries. (Updated on 16-0CT-2003 to standardise

The gene may be incorporated into a vector and expressed in transformed hosts, pref. Bacillus licheniformis or Bacillus pumilus, for prodn. of thermostable mature xylanase (AAR92053). The enzyme is useful in the paper pulp, animal feed and baking industries. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            739

an example of the present invention. The present invanious activity used in novel method for providing a novel DNA sequence encoding a polypeptide from a microorganism with an activity of interset. The method comprises: (i) PCR amplification of the DNA with PCR primers with homology to (a) known gene(s) encoding a polypeptide with an activity of interest; (ii) linking the obtained PCR product of a 5' structural gene sequence; (iii) expressing the resulting hybrid DNA sequence; (iv) screening for hybrid DNA sequences encoding a polypeptide with the activity of interest or a related activity; and (v) isolating the hybrid DNA sequence identified in step (iv). This method provides for identification and isolation of sequences from microorganisms without having to cultivate and isolate the microorganism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                661 GTATATAGCAATACACTAAGAATTAACGGTAACCCTCTCTCAACTATTAGTAATGACGAG 720

Xylanolytic enzymes are used for enzymatic breakdown of agricultural wastes for production of alcohol fuels, enzymatic treatment of animal feeds to release free pentose augars, manufacturing of dissolving pulps yielding cellulose and bio-bleaching of wood pulp. They are also used for treatment of lignocellulostic material eg. paper and pulp, or as an animal feed additive. (Updated on 25-MAR-2003 to correct PR field.) (Updated on 25-MAR-2003 to correct DR field.) (Updated on 25-MAR-2003 to correct OS field.) (Updated on 17-OCT-2003 to standardise OS field)
Xylanolytic enzyme; Bacillus agaradherens NCIMB 40482; breakdown; agricultural waste; alcohol fuel; enzymatic treatment; animal feed; release; free pentose sugar; dissolving pulp; cellulose; bio-bleaching; wood pulp; lignocellulostic material; animal feed additive; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DNA construct encoding Bacillus agaradherens xylanolytic enzyme - and vectors and Bacillus cells containing these, useful for recombinant production of the enzyme for use in agricultural waste breakdown and lignocellulostic material treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 871;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0 Other;

A DNA sequence (AAT16101) coding for a thermostable mature xylanase (AAR92053) was isolated from a gene library of Bacillus sp. 720/1 (LMG P-14798). Sequences were also obtd. (see AAT16102 and AAT16103) for the xylanase precursor and for the complete gene including 5' and 3' untranslated sequences. DNA coding for the mature enzyme may be incorporated into a vector and expressed from either its own promoter or from the Bacillus pumilus PRL B12 promoter (AAQ73996), and used for prodn. of recombinant xylanase in transformed hosts, pref. Bacillus licheniformis or B. pumilus. The enzyme is useful in the paper-pulp, animal feed and baking industries. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                        Xylanase; thermostable enzyme; paper; pulp; bleaching; feedstuff; baking;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Bacillus derived xylanase active over wide pH range - used in treatment of paper pulp, animal feeds and in bakery goods.

                                                                                                                                                                                                                                                                                                                                                              The sequence encodes an alkaline endo-1,4-beta-D-xylanase (G-type) from Bacillus sp. 1-43-3. Fragments of the sequence (e.g. the internal fragments given in AAQ9287) may be amplified by polymerase chain reaction, e.g. using primers with sequences AAQ92866, AAQ92867, AAQ92868 and AAQ92869. The DNA may be cloned in Escherichia coli using a plasmid vector for recombinant xylanase production. The xylanase may be used in the paper and pulp industries, where it produces an increase in treated pulp in an ECF pulp bleaching process, at pH 9.0 and 65 deg C. the enzyme may be used in production of paper, board and fluff pulp, and has low cellulase activity. The increased brightness produced using the xylanase allows reduction in the amount of bleaching chemicals used.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        117

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents a positive clone for xylanase activity from an example of the present invention. The present invention describes a novel method for providing a novel DNA sequence encoding a polypeptide from a microorganism with an activity of interest. The method comprises: (i) PCR amplification of the DNA with PCR primers with homology to (a) known gene(s) encoding a polypeptide with an activity of interest; (ii) linking the obtained PCR product of a 5' structural gene sequence and a 3' structural gene sequence; (iii) expressing the resulting hybrid DNA sequence, (iv) screening for hybrid DNA sequences encoding a polypeptide with the hybrid DNA sequence encoding a polypeptide the hybrid DNA sequence encoding a polypeptide the hybrid DNA sequence identified in step (iv). This method provides for identification and isolation of sequences from microorganisms without having to cultivate and isolate the microorganism

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes an isolated or recombinant polypeptide (1), having 50% or more identity to 190 300-1200 residue amino acid sequences (31), given in the specification, over a region of 100 or more residues and the polypeptide as thermostable xylanase activity. (I) is useful for dough conditioning; beverage production; as a nutritional supplement in animal feed; reducing light in a wood or a wood product; and for eliminating and protecting animals from a microorganism comprising xylan. The polymucheotide (II) encoding (I) is useful for amplifying nucleic acid encoding a polypeptide having a xylanase activity which involves amplifying (II) or its subsequence. (I) is useful for treating and preventing bacterial infection and fungal infection e.g. coccidiosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GGGGATTGCCACATTTAAACAATATTGGAGTGTTCGAAGATCGAAACGCACGAGTGGCAC 548
                                                                                                                                                                                                                                                                                                                The invention describes an isolated or recombinant polypeptide (I), having 50% or more identity to 190 300-1200 residue amino acid sequences (SI), given in the specification, over a region of 100 or more residues and the polypeptide as thermostable xylanase activity. (I) is useful for dough conditioning, beverage production, as a nutritional supplement in animal feed; reducing lignin in a wood or a wood product; and for eliminating and protecting animals from a microorganism comprising xylan. The polymucleotide (II) encoding (I) is useful for amplifying nucleic acid encoding a polypeptide having a xylanase activity which involves amplifying (II) or its subsequence. (I) is useful for treating and preventing bacterial infection and fungal infection e.g. coccidiosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AGIGGAIGGCGGIACTIAIGAAAIAIAIGAAACIACCGGGIAAAICAGCCTICCAICGA 497

The invention describes an isolated or recombinant polypeptide (I), CC having 50% or more identity to 190 300-1200 residue amino acid sequences (SI), given in the specification, over a region of 100 or more residues CC and the polypeptide as thermostable xylanase activity. (I) is useful for: dough conditioning; beverage production; as a nutritional supplement in animal feed; reducing lignin in a wood or a wood product; and for animal feed; reducing animals from a microorganism comparising xylan. CC The polynucleotide (II) encoding (I) is useful for amplifying nucleic acid encoding a polypeptide having a xylanase activity which involves amplification of a template nucleic acid with a primer pair capable of amplification of a template nucleic acid with a primer pair capable of complifying (II) or its subsequence. (I) is useful for treating and preventing bacterial infection and fungal infection e.g. coccidiosis.

This sequence encodes xylanase protein isolated from an environmental cc sample.
                                                                                                608
                                                                                                                                                            617

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A Bacillus pumilus PTL B12 (ATCC 55443) gene library was screened for recombinant plasmids carrying the xylanase gene. A chromosomal fragment obtained from isolate PBRXI was subcloned and expressed in Escherichia coli JM109. The sequence of the xylanase gene (as a 1022 bp Sau3AI fragment) carried by a selected transformant is given in AAQ80923
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Tritaaccccacccccatricatritaticrcraticacciccaccaarcrccattagcr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is a DNA encoding xylanase A (XynA) from Clostridium stercorarium. XynA contains family VI cellulose binding domain (CBD) which is homologous to the CBD of xylanase Z (XynZ) of Clostridium thermocellum. XynZ is an enzymatic component of C. thermocellum cellulosome and has a multi-domain structure which includes a dockerin domain, a catalytic xylanase domain, a family VI cellulose binding domain and a domain of unknown function. The unknown domain in the N-terminal region of XynZ has been found to contain feruloyl (phenolic acid) esterase which is involved in the degradation of plant cell wall

material. The novel feruloyl esterase is thermostable, easy to purify, has high temperature optima and stable over a wide pH range. The enzyme is used for producing ferulic acid from wheat bran or agricultural byproducts, treating grasses or other plant materials used in the pulp and paper industries, in feed processing and as a food additive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           xynB gene; xylanse; enzyme; Dictyoglomus thermophilum strain Rt46B.1; G-Xylanase; beta -1,4-xylanase activity; activity; thermal stability; biological bleaching; cellulose product; paper pulp; ss.

The gene was obtd. by genomic walking PCR of DNA from an extremely thermophilic bacterium, strain TG456 (CBS 213.94), isolated from a New Zealand hot spring. He gene can be inserted into a vector and used for the produce recombinant xylanase D in microbial host cells, esp. Escherichia coli. (Updated on 25.MAR-2003 to correct PI field.)
